Dear Colleague,

Although the submitter may have intended to submit the sequence to GenBank, the submission was in fact sent to the address for GSDB and was processed by them.

Information about the history of a record, including the first date of public release, can only be provided by the database to which the original submission was made.

The accession number about which you have inquired, L39317 was submitted to GSDB. The GSDB no longer accepts, or processes new sequences. We are unable to get the precise first date of release on their site from them anymore, so we can only inform you to the best of our records as to when the sequence was first released here at the GenBank sequence database. This date may be some time after public release at GSDB database. We were not provided with the GSDB submission and release history records when the sequence records were given to us.

GSDB number L39317 appears to have been first released into the GenBank database on June 2, 1995.

Please note that the International DNA Sequence Databases take no responsibility for making any determination of the priority issues for patent claims. We are able only to inform you, to the best of our knowledge, of the release date of the pertinent sequence into the public database. We appreciate your understanding and cooperation.

Sincerely,

Monica L. Romiti
